Allowable Subject Matter

Claims 1-14 allowed.

The following is an examiner's statement of reasons for allowance:

As independent claims 1, 2, 3 and 10 claim that one of pixels include an inverting device that outputs an output signal obtained by inverting an input signal, see fig. 2 of the specification that illustrates a circuit diagram of one of the pixels. The pixel includes a first transistor TR1, a second transistor TR2, a third transistor TR3, an inverter INV, a hold capacitor C, and the OLED element 70. The inverter INV functioned as an inverting circuit and includes a fourth transistor TR4 and a fifth transistor TR5. These transistors function as switching elements and are formed by TFTS. As a result of this, turning on and turning off of the organic light-emitting diode is not inverted due to rewriting, thus improving the contrast. In order to rewrite an electric charge stored in the hold capacitor without changing its logical level, rewriting must be performed an even number of times. By performing writing an odd number of times, the logical level is inverted.

As Applicant specifies the term "switching" refer to a transistor, not to a diode, a capacitor, or a combination thereof, see page 2 of the remarks lines 17-20, and paragraph [0061].

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
